

Meeting the challenge of sustainability will require new ways of collaborating over all sectors of society. AVBP provides structures and methodologies to help get such collaboration up and running quickly. Furthermore, AVBP methodologies help focus on short term steps towards a sustainable future to create an impetus for further collaboration.

HOW WE WORK

We work with regional or local actors to:

- Define the geographical area to operate within
- Gather stakeholders to initial briefings
- Identify major resources and needs
- Set mutual targets
- Put together action plans
- Put Governance and project management into place
- Set up GRI or similar reporting based on chosen indicators

WHY USE US?

The models of collaboration and across the board projects have been developed by AVBP over a long period. Unlike some conventional models and techniques, these are designed with the three most important goals of sustainability in mind:

- across the board collaboration
- achieving significant reductions in waste production and energy consumption whilst
- stimulating growth and development in the areas of health, society and economy

WHAT WE OFFER

We offer overall program and project management, initial workshop facilitation and our unique range of Web-based indicators, GRI and collaboration tools, as well as commercial network opportunities for Regional Products.

- AVBP acts as general contractor towards the Co-operating body, of Sustainability Council, Local municipality, Chamber of commerce or whichever organ is leading and coordinating development.
- As far as possible we engage local companies in projects, either from the start or after initial cooperation.

Across the Board Community Action towards Sustainability
